SUMMARY

AI Prompt Engineer with an MCA from MIT Manipal who designs, evaluates and ships large language model (LLM) systems: multi-agent pipelines, retrieval-augmented generation (RAG) and generative media, built with Claude Code. Built 11 projects including 5 client projects, interned as a web developer, and co-authored a research paper accepted at IEEE ICCCNT 2025.

EDUCATION

Master of Computer Applications (MCA) | Manipal Institute of Technology (MIT Manipal), Karnataka July 2025
Bachelor of Computer Applications (BCA) | Maharaja Agrasen College, Raipur, Chhattisgarh July 2023

EXPERIENCE

Web Development Intern | Udupi Web Solutions (UWS), Udupi, Karnataka · On-site Feb 2025 – Jun 2025

- Developed and debugged web applications with design and backend teams over a 4-month internship, joining code reviews.

PROJECTS

Enterprise Multi-Agent Knowledge Assistant | Python, LangGraph, OpenAI API, Qdrant, FastAPI, Next.js, Docker 2026

AI assistant that answers staff questions from company documents with cited sources, and refuses rather than guesses.

- Architected an 8-agent LangGraph pipeline (planner, retriever, verifier, reflection) with bounded self-correction loops.
- Engineered structured-output prompts on real files; enforced access control as code guardrails outside the LLM.
- Shipped page-level citations across 6 file formats, 36 REST API operations, live agent streaming and 108 passing tests.

PrimeGold | TypeScript, Fastify, Prisma, SQLite, React, Capacitor 2026

Tally-style accounting system in daily use at a trading business: invoicing, GST, inventory and payroll, fully self-hosted.

- Delivered 239 API route handlers, 65 data models and 61 screens, shipped as a PWA, an Android app and a Windows app.
- Eliminated rounding errors with integer-only money and GST maths, verified by 473 unit tests and 27 end-to-end scripts.

Abysal Ventures | Generative video, prompt chaining, FFmpeg, JavaScript, Canvas 2D 2026

Cinematic website where scrolling the page is a 3,800 m ocean dive, built from AI-generated footage.

- Directed 5 generative-video clips into one seamless descent using an identity-reference image and last-frame chaining.
- Wrote shot-level prompts (camera path, duration, exclusions) and graded 318 frames with FFmpeg for scroll playback.

GAMEVERSE | React 19, GSAP, Framer Motion, Web Audio API, image and video generation 2026

One website that transforms into three game worlds, with AI-generated characters, posters and animated scenes.

- Authored structured briefs and generated consistent key art and animation across 3 worlds and 118 media assets.
- Built one React shell that re-themes colour, type, weather and sound from a single attribute across 4 routes.

Vault | NestJS, Prisma, PostgreSQL, React, AES-256-GCM, Cloudflare Tunnel 2026

Self-hosted document vault where signing in alone is never enough to read a file.

- Secured every file with AES-256-GCM and a second master password; a test blocks any unauthorised route (117 tests).

More projects: GK Master (offline learning PWA, 166 tests), DocVault (encrypted Android app, Flutter), Sugar Rush (ordering platform, Next.js), Operate (company management system, NestJS), Bharti Engineering (corporate website).

RESEARCH

AI-Based Approaches for Detecting Deepfake Audio Content | Co-author, IEEE ICCCNT 2025, IIT Indore July 2025

- Surveyed deepfake audio detection across 47 models, 11 datasets, 38 languages and 82 TTS architectures (Paper ID 8711).

CERTIFICATIONS

Agents and Workflows | OpenAI Academy Jun 2026

Claude Code 101 | Anthropic

Machine Learning with Apache Spark | IBM · Coursera Oct 2024

TECHNICAL SKILLS

LLM & GenAI: Prompt engineering, LLM evaluation, RAG, multi-agent systems, LangGraph, embeddings, LangSmith

AI Tools: Claude Code, ChatGPT, Claude, Gemini, Google Veo, GitHub Copilot, OpenAI Codex, Perplexity, n8n

Languages & Stack: Python, TypeScript, SQL, Dart · FastAPI, Next.js, React, NestJS, Flutter, PostgreSQL, Docker, Git
